

Tactic X-R

TACTIC X-R Brings Scalable Tactical Training to Modern Security Forces

TACTIC X-R is a virtual and mixed reality tactical training system developed for armed forces, special operations units, and law enforcement organizations. The system delivers a realistic, safe, repeatable, and measurable training environment designed to improve operational readiness while reducing dependence on conventional live-fire-only training methods.

By combining immersive VR / MR technologies, AI-driven scenario management, realistic weapon interaction, and replay-enabled after-action review, TACTIC X-R supports the development of firearm handling, tactical decision-making, situational awareness, and coordinated team response. The system is designed to support both individual and team-based training within a single scalable architecture.

TACTIC X-R offers configurable scenarios, scalable deployment options, and multi-location coordination capability, making it suitable for modern operational requirements across a broad range of security environments. From basic marksmanship to team-level tactical readiness, it provides institutions with a flexible training capability aligned with evolving mission demands.

Key Highlights

- Realistic and repeatable tactical training
- AI-driven mission scenarios
- Team-based and multi-location training capability
- Replay-enabled after-action review
- Mobile and fixed deployment flexibility
- Scalable from individual proficiency to team-level readiness

TACTIC X-R is more than a simulator. It is a scalable tactical training capability designed to strengthen readiness, improve team performance, and support mission-oriented preparation across modern security institutions.
